SUPREME FACILITY MANAGEMENT LIMITED

PRODUCT REQUIREMENTS DOCUMENT

Business goals • Users • Scope • Features • Acceptance criteria

DRAFT FOR STAKEHOLDER REVIEW • VERSION 1.0 • 26 OCTOBER 2026

Document status and usage

Detailed planning baseline based on public website observations and project context. Not yet approved by the company. Confirm assumptions, scope, legal content, vendors, data handling and operational ownership with relevant stakeholders before production.

1. Executive Summary

Purpose: Rebuild https://supremefacility.com/ as a modern, accessible, fast, maintainable and security-conscious corporate website while preserving approved corporate information, service discovery, lead generation, careers and investor-relations content.

Product definition: A public corporate information and business-development platform for enterprise customers, prospective employees, investors/shareholders, partners, media and other stakeholders. It is not an internal operations system.

Business outcomes: Improve brand credibility, service discoverability, mobile UX, qualified inquiries, careers usability, investor document discovery, content governance, performance, accessibility and maintainability.

Status: Draft v1.0 for stakeholder review, dated 26 October 2026. Not a company-approved baseline. This document is based on public inspection and must be validated with business, IT, HR, Marketing, Investor Relations and Compliance.

2. Product Vision, Objectives and Non-Goals

Vision: Present Supreme as a credible integrated business-services provider through a clear digital experience that makes its services, sectors, people, company story and official disclosures easy to understand and find.

Objectives: Modernize UX without losing brand recognition; improve navigation and mobile usability; create reusable page templates; provide secure inquiry flows; preserve careers and investor content; support approved publishing workflows if required; meet agreed SEO, performance, accessibility and security standards.

Non-goals: No internal ERP/HR/transportation system rebuild; no public customer portal unless separately approved; no investor trading features; no automatic publication of regulatory disclosures; no CRM/recruitment-system replacement without approved integration scope; no fabricated metrics, claims or testimonials.

3. Users and Stakeholders

External users: Enterprise buyers/procurement, existing clients, job seekers, investors/shareholders/analysts, media, partners and general visitors.

Internal stakeholders: Executive sponsor, Marketing/Communications, HR/Recruitment, Investor Relations/Company Secretary/Compliance, IT/Security, Legal, service owners, developers, QA, hosting and CMS administrators.

Personas: Enterprise buyer seeks service capabilities, industry proof and an inquiry route. Job seeker seeks current roles and clear application instructions. Investor seeks accurate, current disclosures. Content editor may need to update content without code changes (TBD). Administrator needs secure access, auditability and recovery.

4. Scope and Conditional Scope

In scope: Homepage; About/company profile; leadership; mission/vision/values; sustainability/CSR, safety and quality content; service overview/detail pages; sector pages; careers/vacancies; resources/blog/news if retained; Investor Relations/document library; contact/offices; request-a-quote/contact forms; shared header/footer; SEO metadata; analytics subject to policy; accessibility; migration/redirects; documentation and handover.

Conditional: CMS/editor self-service; editorial approvals; document upload; search; CRM/email integration; recruitment integration; newsletter; analytics consent management; multilingual content; custom database. Confirm before committing.

Out of scope unless approved: Accounts for public visitors, e-commerce/payment, personalized dashboards, mobile app, complex personalization, internal employee workflows, custom applicant tracking or stock-market data feeds.

5. Existing Public-Site Baseline

Homepage observed: Tagline 'Making Sustainability Common Place'; themes of Sustainability, Safety, Quality, People, Process and Technology; value proposition around visibility/transparency, responsibility/accountability and pay-for-delivery; scale metrics; service categories; leadership and industry sectors.

Service categories observed: Integrated Facility Management; Supply Chain Solutions; Employee Transportation Services; Corporate Food Solutions; Production Support Services. Detailed nested service pages must be inventoried.

Investor section observed: IPO materials, policies, board/committee information, financials, annual reports, group/subsidiary information, exchange disclosures, board meetings, quarterly/annual compliance, results, governance, AGM/voting and CSR materials.

Careers observed: Vacancy content and application instructions exist publicly. HR must confirm which roles remain active.

Content validation: Public figures and contact/leadership information must be verified by owners. Public pages may contain inconsistent/outdated numbers; do not silently choose one.

6. Proposed Sitemap

Global navigation: Home; About Us; Services; Sectors/Industries; Investor Relations; Careers; Resources/Insights; Contact Us. Labels and order require approval.

About: Overview; mission/vision/values; leadership; sustainability/CSR; safety/quality; people/process/technology; approved certifications and company facts.

Services: Service overview; IFM (hard, soft and specialized services as applicable); Supply Chain Solutions; Employee Transportation; Corporate Food Solutions; Production Support; other staffing/HR/PMO offerings only if confirmed.

Sectors: Industry landing page and individual sector pages only for verified sectors. Public site currently references categories such as IT/ITES, engineering, automotive, healthcare, hospitality, public sector, education, logistics, retail, e-commerce, commercial buildings and corporate parks.

Investor Relations: IPO; policies; board and committees; financials; annual reports; group/subsidiary disclosures; exchange disclosures; board meetings; compliance; results; governance; AGM/voting; CSR; investor contacts. Compliance owner approves taxonomy.

Careers and Resources: Careers overview; current vacancies; role details/application method. Resources may include approved articles/news/downloads if confirmed.

Contact: General contacts, office/location information, contact/request-quote form and approved privacy/legal links.

7. Functional Requirements

FR-01 Navigation: Responsive global navigation, active states, accessible keyboard operation, mobile menu and logical hierarchy. Mega-menu may be used for large service trees but must work on touch.

FR-02 Homepage: Approved positioning statement, primary CTA, services, verified metrics, sectors, differentiators, approved leadership/insights and contact CTA. Never hard-code unverified figures.

FR-03 Page templates: Reusable service, sector, leadership, company and editorial templates supporting headings, rich text, imagery, related links, CTA blocks and metadata.

FR-04 Services/sectors: Clear overview-to-detail navigation, accurate descriptions, benefits, scope and industry relevance; contextual inquiry CTA.

FR-05 Contact/quote: Fields agreed with business; accessible validation/errors; server-side validation; rate limiting/anti-bot controls; privacy notice; confirmation and failure states; approved delivery destination.

FR-06 Careers: HR-approved role title, location, type, description, responsibilities, qualifications, application method and dates/status where supplied. Expired roles are removed or archived. Applicant data follows HR/Legal policy.

FR-07 Investor library: Searchable/filterable categories and metadata including title, category, entity, reporting period/date, publication date and file link as applicable. Correct file and working accessible download.

FR-08 Publishing governance: If CMS is selected, restrict roles; use draft/review/approval/publish states and audit history. Regulatory material cannot auto-publish without the company-defined approval process.

FR-09 SEO: Unique titles/descriptions, canonical URLs, indexability controls, sitemap, robots directives, Open Graph, alt text, accurate structured data and reviewed 301 redirects.

FR-10 Analytics: Conditional approved events: CTA clicks, submissions, downloads. Define privacy/consent controls and never send personal form contents to analytics.

FR-11 Accessibility: Target WCAG 2.2 AA where feasible; semantic landmarks, keyboard support, visible focus, sufficient contrast, labels/errors, reduced motion and descriptive links.

FR-12 Legal/privacy: Publish only company-approved privacy, cookie/consent, terms and other legal content; Legal/Compliance owns wording.

8. User Journeys and Acceptance Criteria

Enterprise inquiry: Visitor understands offering → browses service/sector → submits inquiry → receives result → approved team receives it. Valid submissions reach approved destination; invalid inputs show accessible errors; abuse is limited; success is not shown on failure.

Job seeker: Careers → current opening → role details → approved application route. Status is verified by HR; no expired role appears active; mobile layout works.

Investor: Investor Relations → category/year → document → download. File, title, date and category match; link works; historic disclosures are retained; keyboard/mobile access works.

Editor (conditional): Authorized editor drafts → previews → submits for review → approver publishes. Authorization enforced server-side; changes are traceable; draft content is not public/indexed.

Mobile visitor: Navigation, forms and downloads work at supported widths without horizontal overflow; touch targets and reading order remain usable.

9. Content Migration and SEO

Inventory: Create URL-by-URL inventory: status, title, H1, page type, canonical URL, analytics/backlinks if available, assets, downloads, forms, links and proposed destination.

Disposition: Classify every item as migrate, rewrite, archive, redirect or remove; assign an owner and approval status.

URL preservation: Preserve old URLs where practical. Map changed URLs to exact new equivalents with 301 redirects; avoid chains and blanket redirects to homepage.

Investor documents: Record metadata, source URL, file identity and category; verify files open; reconcile counts with Investor Relations; do not invent missing documents or overwrite historical filings.

Assets and claims: Use company-owned/licensed images. Verify statistics, leadership, certifications, claims, jobs and contact details with owners.

10. Non-Functional Requirements

Performance: Target Core Web Vitals 'good' at 75th percentile when field data exists: LCP ≤2.5s, INP ≤200ms, CLS ≤0.1. Use lab tests before field data is available; optimize images/fonts and avoid oversized client bundles.

Availability/scaling: Agree uptime/SLA with company; monitor homepage, contact form and investor library; use CDN caching for public content and plan for disclosure/recruitment traffic peaks.

Compatibility: Current major Chrome, Edge, Firefox, Safari and mobile browsers; agree exact support matrix.

Maintainability: Typed reusable components, documented conventions, automated tests, dependency update process and no unnecessary custom infrastructure.

Privacy: Minimize collected personal data; define purpose, access, retention and deletion with Legal/HR. English is assumed for launch; more languages require approval.

11. Security and Governance

Principles: Secure by default; least privilege; defense in depth; server-side authorization; data minimization; auditability; no secrets in browser bundles.

Admin/CMS: If used, MFA where available, named accounts, least-privilege roles, secure sessions, offboarding and separation of editor/approver/admin where required.

Forms/files: Server validation; rate limits; bot protection; safe output handling; no unnecessary sensitive data; authorized uploads only; allowlisted file types/sizes; malware scanning where available; non-executable storage.

Platform: HTTPS; secure headers and CSP tuned to integrations; dependency/secret scanning; protected branches; reviewed deployments; restricted credentials; logging with sensitive data redacted.

Operations: Define alerting, incident response, credential rotation, backup scope, RPO/RTO, restore tests and rollback. IT/Legal determines applicable Indian privacy, cybersecurity and disclosure obligations; this PRD is not legal advice.

12. Success Metrics, Launch Gates and Risks

KPIs: Qualified inquiry volume/conversion; CTA engagement; service/sector engagement; careers-to-application clicks; investor document discovery/download success; content freshness; organic search visibility.

Technical KPIs: Core Web Vitals, uptime, errors, form delivery success, broken links, redirects, accessibility defects, vulnerabilities and restore success.

Launch gates: Business content/design sign-off; routes and redirects verified; investor documents reconciled; forms tested end-to-end; accessibility/performance checks complete; security issues resolved or formally accepted; backup/rollback tested; monitoring active.

Handover: Repository, deployment guide, CMS/editor guide if relevant, environment variable names (no secrets), architecture, sitemap, redirect map, test evidence, runbooks, known issues and ownership.

Risks/open decisions: Unclear owners; hidden legacy pages; outdated content; investor disclosure errors; SEO loss; integration gaps; scope creep; limited internship time; vendor lock-in. CMS, hosting, CRM, recruitment flow, analytics, consent, SLA, budget, launch date and maintenance owner remain TBD.
